

Chrome Enterprise Recommended Solution Overview: Pharos Chrome Print

Simple secure printing for ChromeOS users

Today, it's more important than ever to protect information security and confidentiality.

ChromeOS devices are becoming increasingly popular in enterprises all over the world. It's critical that users have easy access to secure printing.

Pharos Chrome Print is an extension that makes it easy for ChromeOS users in a Pharos-managed site to print reliably and securely.

Pharos print management software enables organizations of all sizes to secure their print workflows and leverage comprehensive print analytics, helping to protect information and control print-related costs.

With this extension, ChromeOS device users can print as they normally do and pick up their print jobs immediately. Or, organizations can choose to enhance security with Secure Release workflows where print jobs are parked in a secure queue until the user walks up to a printer on the network and uses their phone or ID card to quickly log into release their print jobs.

Discover the benefits

Secure Release workflows enhance security

Most organizations need their printers to be secured for authorized use, and they need to ensure that printed documents end up in the right hands. IT managers need to provide their people with access to reliable printing services, regardless of the device or platform they use.

Pharos Chrome Print makes it easy for any enterprise to add ChromeOS device users to their Pharos print management system. Make print the way it should be: simple, secure, cost-effective, and sustainable.
